1. About Insight Player

Insight Player is a Windows desktop media player designed for clean local media playback, a focused dark interface, playlist management, and technical media information. It uses established media technologies for playback and file analysis while keeping the interface simple and familiar.

What Insight Player is designed to do

- Open and play common local video and audio files.
- Manage a simple playlist and move between items.
- Display file and stream details through the Information panel.
- Provide a modern control bar for play, pause, seek, volume, fullscreen, speed, and navigation.
- Open DVD or disc-related media where the installed build and the source media allow it.

What Insight Player does not promise

- It does not bypass DRM, AACS, BD+, region locks, or other copy-protection systems.
- It does not guarantee that damaged, encrypted, incomplete, or unsupported files will play.
- It does not upload your media files or playlist data to the cloud unless a future online feature explicitly states otherwise.

Important

Use Insight Player with legally acquired media only. Protected discs and encrypted formats may require legal components not bundled with the application.

2. System Requirements and Installation

Requirement	Recommended
Operating system	Windows 10 or Windows 11, 64-bit
Processor	x64 CPU
Memory	4 GB minimum; 8 GB or more recommended for large media files
Graphics	Integrated or dedicated GPU with current drivers recommended
Storage	Enough free space for the app, runtime libraries, and your media files
Disc playback	Internal or external DVD/Blu-ray drive for physical discs
PDF guide	A PDF reader or browser capable of opening User_Guide_EN.pdf

Installing the program

1. Run the Insight Player setup file.
2. Follow the installer steps and choose the installation folder if prompted.
3. After installation, launch Insight Player from the Desktop shortcut or Start Menu.
4. Open Help > User Guide to confirm the installed PDF guide is available.

Portable or release package note

If you use a release package instead of an installer, keep the docs, plugins, runtime DLLs, and assets folders beside InsightPlayer.exe. Moving only the EXE may cause features or documentation to stop working.

3. Main Interface Overview

The main window is organized into clearly separated zones. The center is reserved for the video or welcome screen, the left panel contains the playlist and media information, and the bottom area contains playback controls.

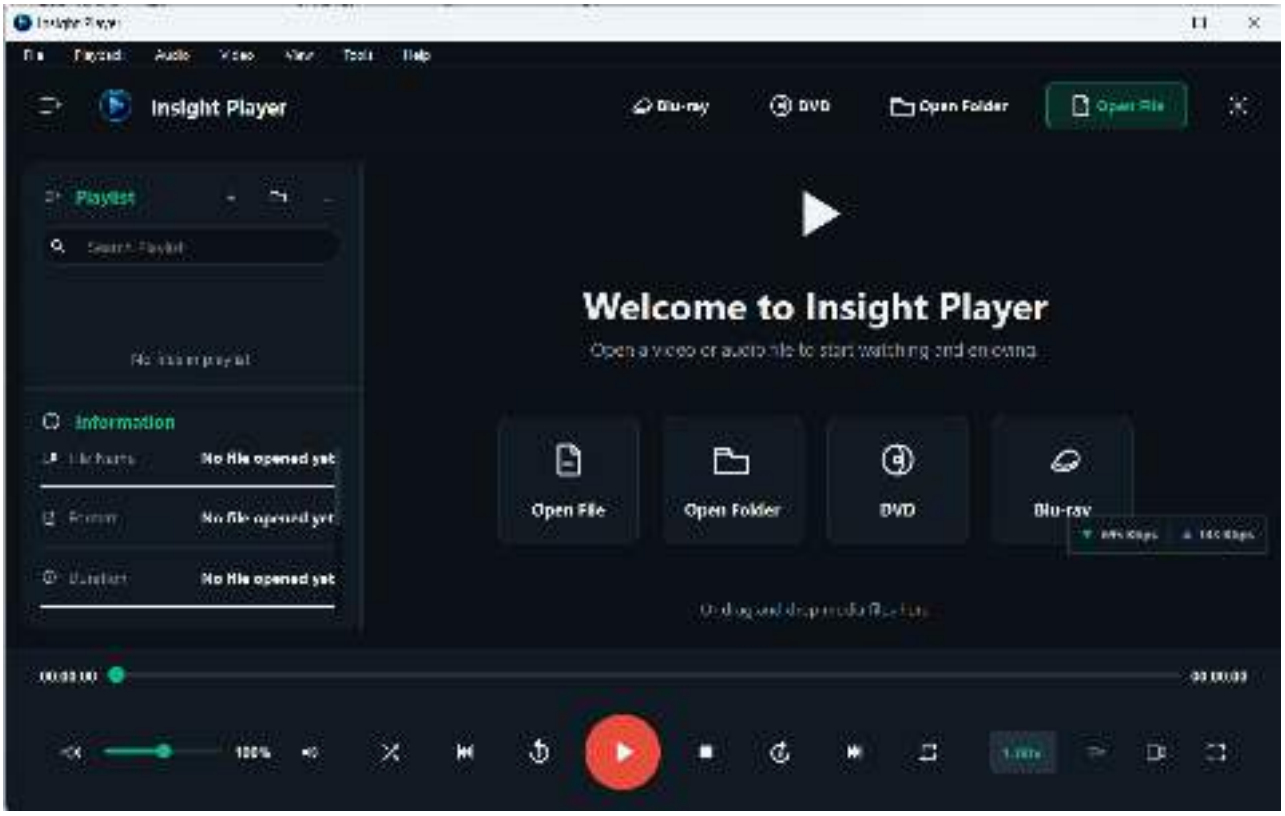

Figure 1 - Insight Player main interface with playlist, information panel, welcome area, toolbar, and playback controls.

Area	Purpose
Top menu bar	Access File, Playback, Audio, Video, View, Tools, and Help commands.
Header toolbar	Quick access buttons for Blu-ray, DVD, Open Folder, and Open File.
Playlist panel	Shows queued media files and lets you manage playback order.
Information panel	Shows file name, format, duration, and additional media information when available.
Main viewing area	Displays video content, welcome screen, or audio-only visual content when enabled.
Bottom controls	Play, pause, stop, seek, volume, mute, previous/next, speed, playlist, snapshot/video, and fullscreen controls.

4. Opening Media

The File menu and the main toolbar provide the primary options for opening media. Use the large Open File button for a single file or Open Folder for a folder of media files.

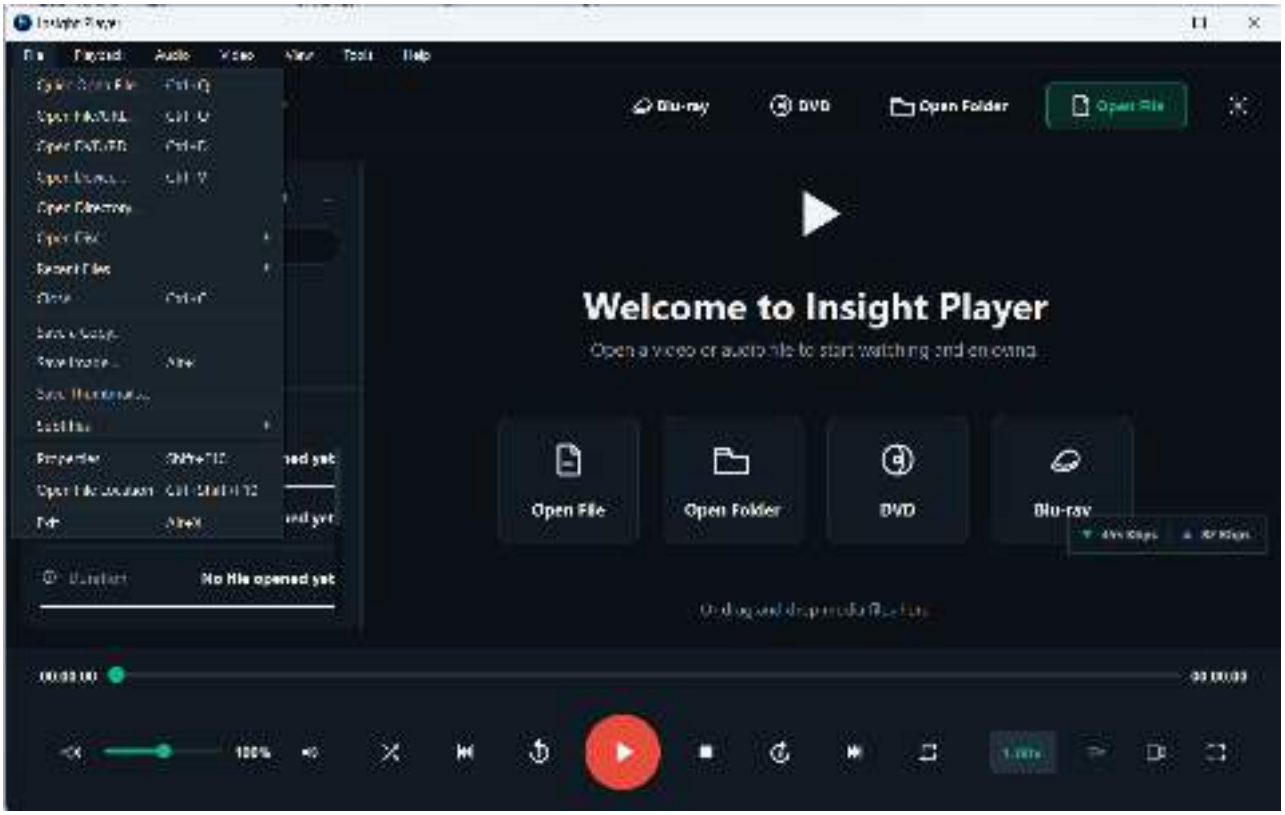

Figure 2 - File menu options for opening files, URLs/devices where available, discs, recent files, and exit.

Open a single file

5. Click Open File on the toolbar or open File > Open File/URL if available in your build.
6. Select a supported audio or video file.
7. The file is added to the playlist and playback can begin from the control bar.

Open a folder

8. Click Open Folder or choose the folder/directory option from the File menu.
9. Select the folder containing your media files.
10. Compatible items are added to the playlist. Duplicate prevention may skip files that already exist in the current list.

Supported media examples

Category	Examples
Video files	MP4, MKV, AVI, MOV, WMV, WEBM, FLV
Audio files	MP3, WAV, FLAC, AAC, OGG, M4A, WMA
DVD sources	DVD drive or VIDEO_TS folder where supported by the current build
Subtitles	External subtitle files where supported by the Tools > Subtitle command

Format note

Actual playback depends on the file, codecs, source condition, runtime libraries, and whether the content is protected or damaged. Avoid claiming that any player can play every file without exception.

5. Playback Controls

Playback commands are available from the Playback menu and the bottom control bar. Most commands are also accessible through keyboard shortcuts.

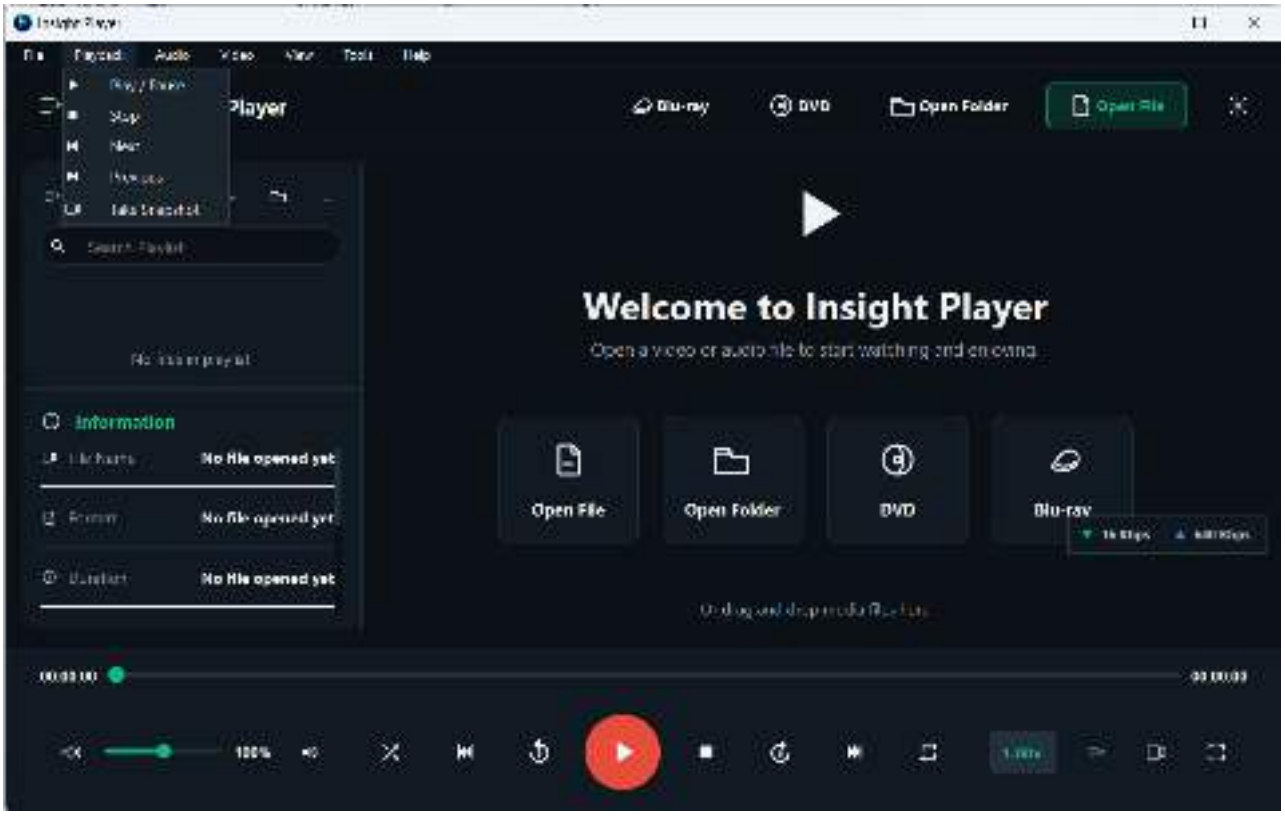

Figure 3 - Playback menu with Play/Pause, Stop, Next, Previous, and Snapshot commands.

Command	Use
Play / Pause	Start playback or pause the current item.
Stop	Stop playback and reset the current item position where supported.
Next	Move to the next item in the playlist.
Previous	Move to the previous item in the playlist.
Take Snapshot	Capture a still frame when a video frame is available.
Seek bar	Drag the timeline to move forward or backward in the media.
Speed	Use the speed control when playback-rate adjustment is supported.

When commands are disabled

Some playback commands may be disabled until a media item is loaded, or they may not apply to the current media type.

6. Audio Controls and Audio-Only Playback

The Audio menu controls volume-related actions. The bottom left volume slider and mute icon are also available directly from the main window.

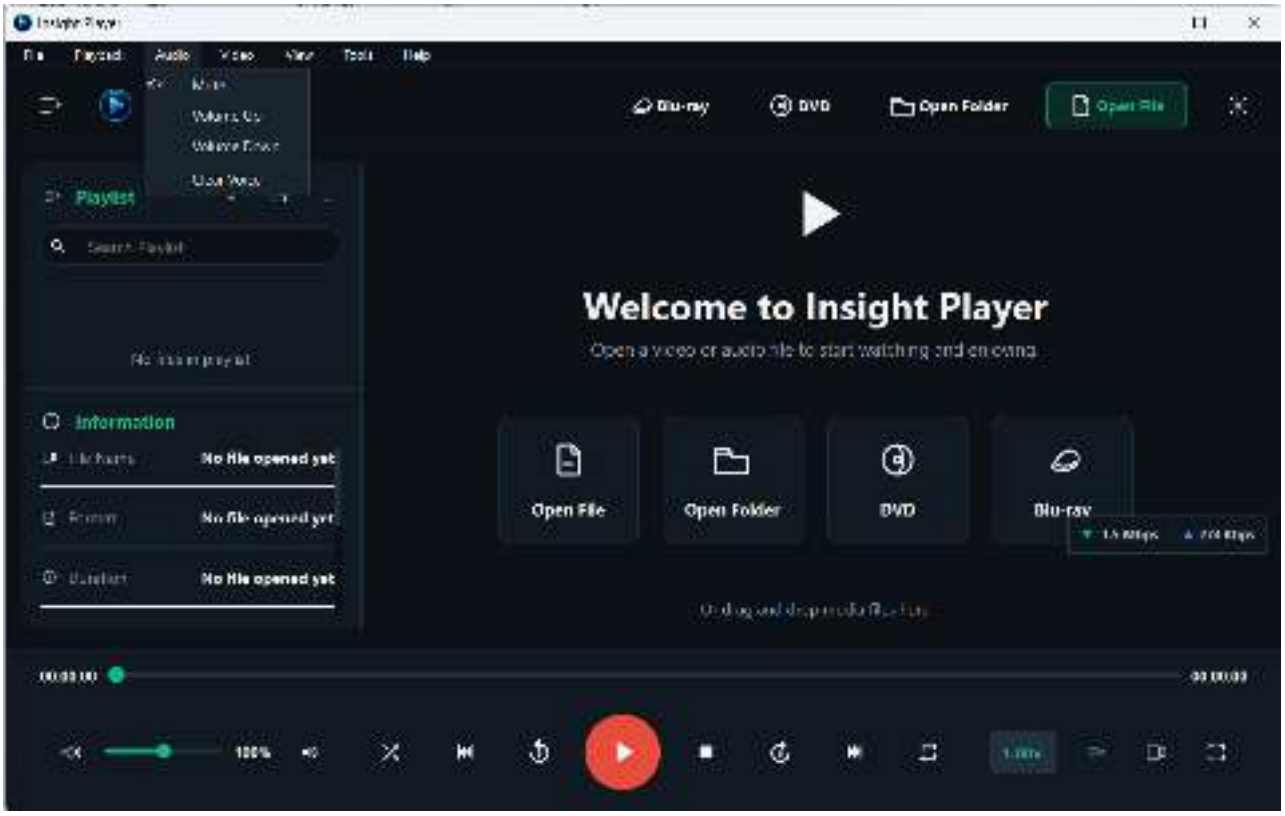

Figure 4 - Audio menu with mute, volume up, volume down, and Clear Voice option where available.

Audio command	Description
Mute	Turn sound on or off without changing the saved volume level.
Volume Up	Increase volume incrementally.
Volume Down	Decrease volume incrementally.
Clear Voice	Audio enhancement option if implemented and enabled in the current build.

Audio-only visualizer

When the audio visualizer feature is enabled in the build, Insight Player may show a branded visual animation in the viewing area while audio-only media such as MP3, WAV, or FLAC is playing. This is a visual display only and should not be described as live frequency analysis unless that has been implemented and tested.

Figure 5 - Audio visualizer design reference. Use only if this visual asset is included in the installed build.

Visualizer wording

Use “audio visualizer display” or “audio animation” unless the program actually analyzes audio frequencies in real time.

7. Video Options

The Video menu provides display and frame-related options. Availability can vary depending on the current media stream, renderer behavior, and build status.

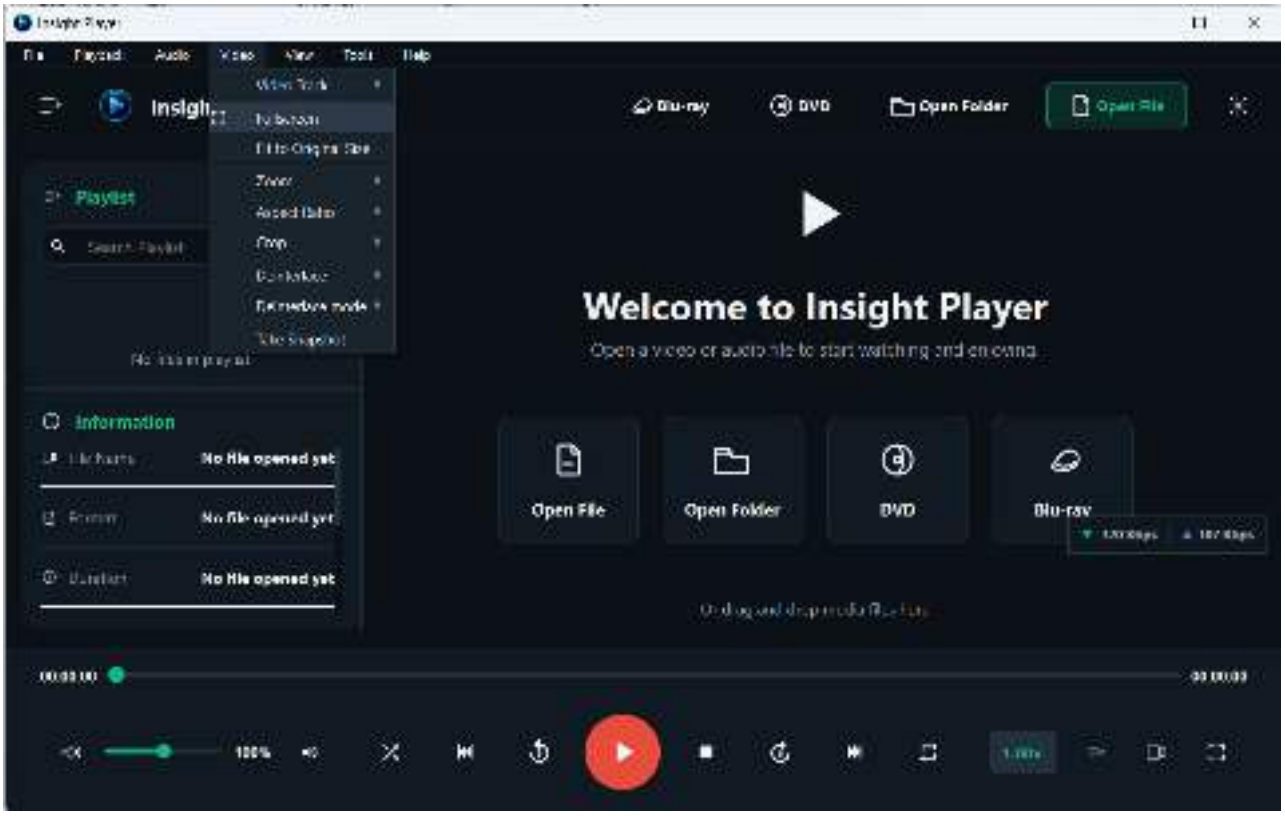

Figure 6 - Video menu with fullscreen, original size, zoom, aspect ratio, crop, deinterlace, and snapshot options.

Video option	Purpose
Fullscreen	Switch the player into fullscreen viewing mode.
Fit to Original Size	Display the video at its original pixel size where supported.
Zoom	Adjust display scale when enabled.
Aspect Ratio	Select or preserve display ratio where supported.
Crop	Change visible video area where supported.
Deinterlace	Improve playback of interlaced video sources when needed.
Take Snapshot	Capture the current frame.

8. View and Layout Options

The View menu controls which interface elements are visible and provides access to display-related layout commands. The current menu shows controls for menu visibility, seek bar, controls, information, playlist, fullscreen, zoom, renderer settings, and options.

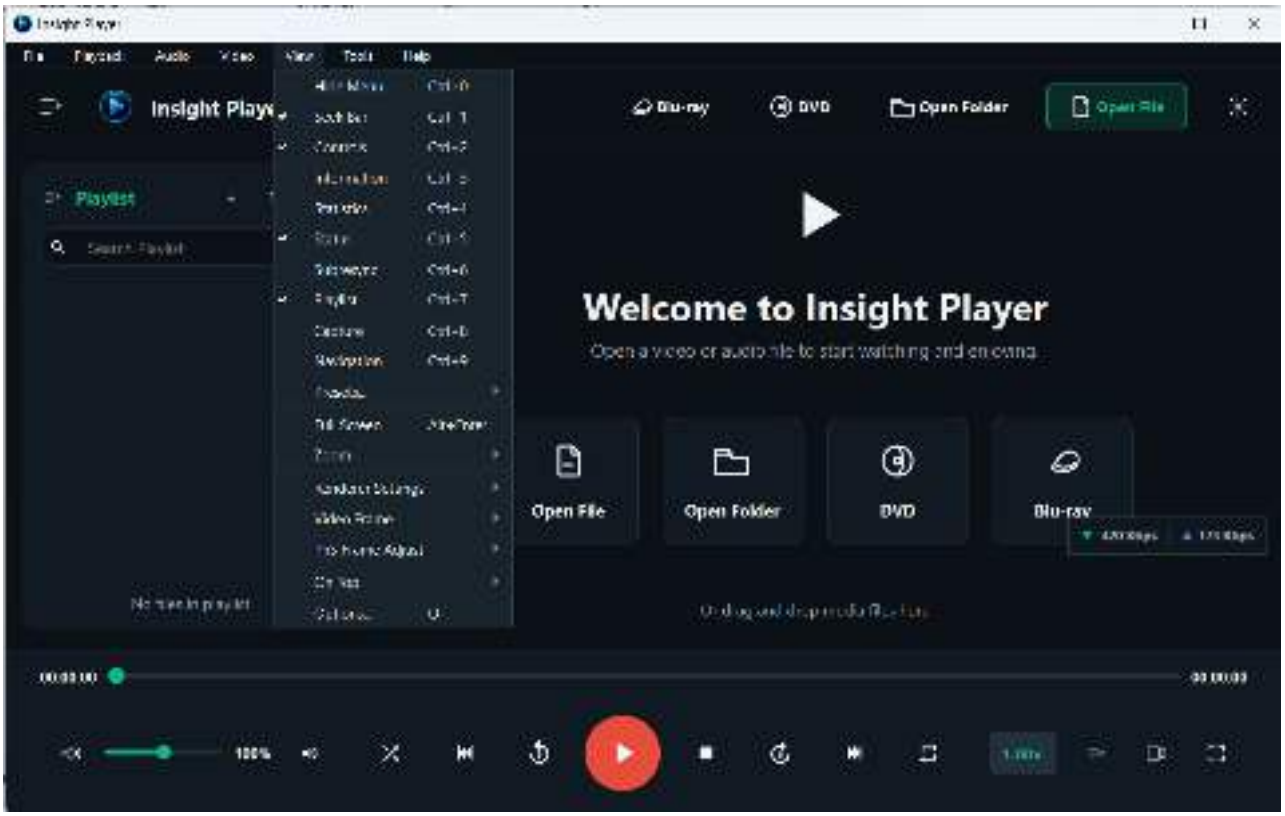

Figure 7 - View menu with interface visibility and layout options.

View option	Description
Hide Menu	Hide or show the top menu bar where supported.
Seek Bar	Show or hide the timeline seek bar.
Controls	Show or hide the control bar.
Information	Show or hide media information area if implemented.
Statistics / Status	Display additional playback status when available.
Playlist	Show or hide the playlist panel.
Full Screen	Enter fullscreen mode.
Options	Open player options or settings where available.

9. Playlist Management

The playlist panel appears on the left side of the window. It is used to queue files, select what to play, and move through a list of media items.

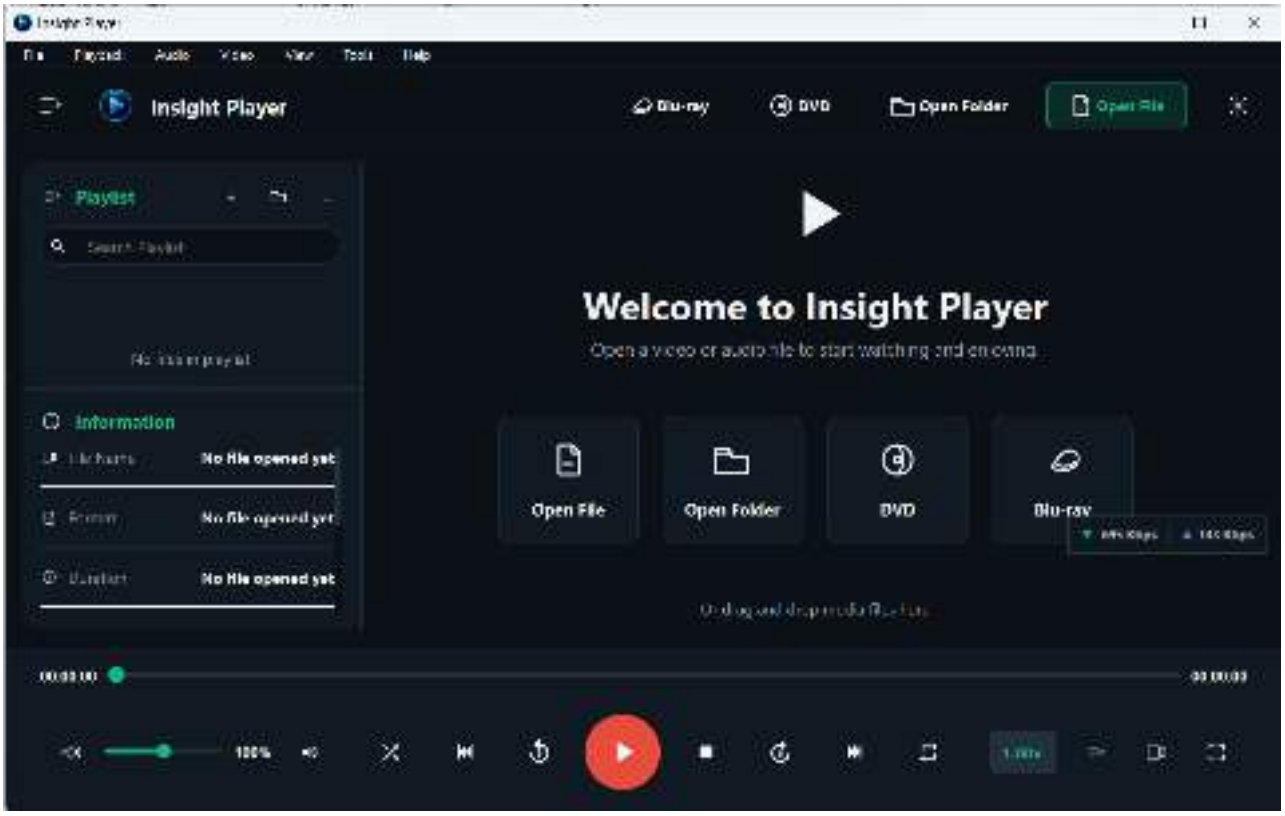

Figure 8 - Playlist and information panels in the main interface.

Typical playlist workflow

11. Open one or more files, or open a folder containing media files.
12. Use the playlist search box to locate an item when the list becomes long.
13. Double-click an item to play it immediately.
14. Use Next and Previous controls to navigate between playlist items.
15. Remove selected items or clear the list using the available playlist buttons when implemented.

Duplicate handling

If duplicate prevention is enabled, the player should avoid adding the same media file more than once in the same playlist session.

10. Media Information Panel

The Information panel displays media information such as file name, format, duration, and other technical metadata when available. The details depend on the file type and whether the analyzer can read the media structure.

Field	Meaning
File Name	The displayed name of the media file currently selected or playing.
Format	Container or format information where detected.
Duration	Total playback length if available.
Video codec	Compression format for the video stream, when present.
Audio codec	Compression format for the audio stream, when present.
Resolution	Width and height of the video stream.
FPS	Frames per second for video streams.
Bitrate	Approximate data rate when reported by the media analyzer.
Sample rate / channels	Audio sampling frequency and channel layout when available.

Information limits

Media information may be incomplete if a file is damaged, encrypted, still being copied, on a slow removable drive, or uses uncommon metadata structures.

11. DVD and Blu-ray Notes

The toolbar includes DVD and Blu-ray buttons, and the File menu may provide disc-related open commands. Disc playback depends heavily on disc type, drive access, operating system permissions, and whether the content is protected.

DVD playback

16. Insert the DVD into a compatible internal or external drive.
17. Use the DVD toolbar button or the File menu disc command if available.
18. Select the drive or DVD folder when prompted.
19. If using a folder source, select the folder containing the DVD structure, typically VIDEO_TS.

Blu-ray status

Blu-ray should be documented as planned, experimental, or build-dependent unless full support has been tested. Commercial protected Blu-ray discs often rely on AACS/BD+ and other protection systems. Insight Player should not claim native DRM bypass or bundled decryption keys.

Legal disc notice

Insight Player is intended for lawful playback. It does not include tools to circumvent DRM, disc encryption, or regional restrictions.

12. Tools, Subtitles, and Help

The Tools and Help menus provide access to settings, subtitle commands, the user guide, update checks, and product information.

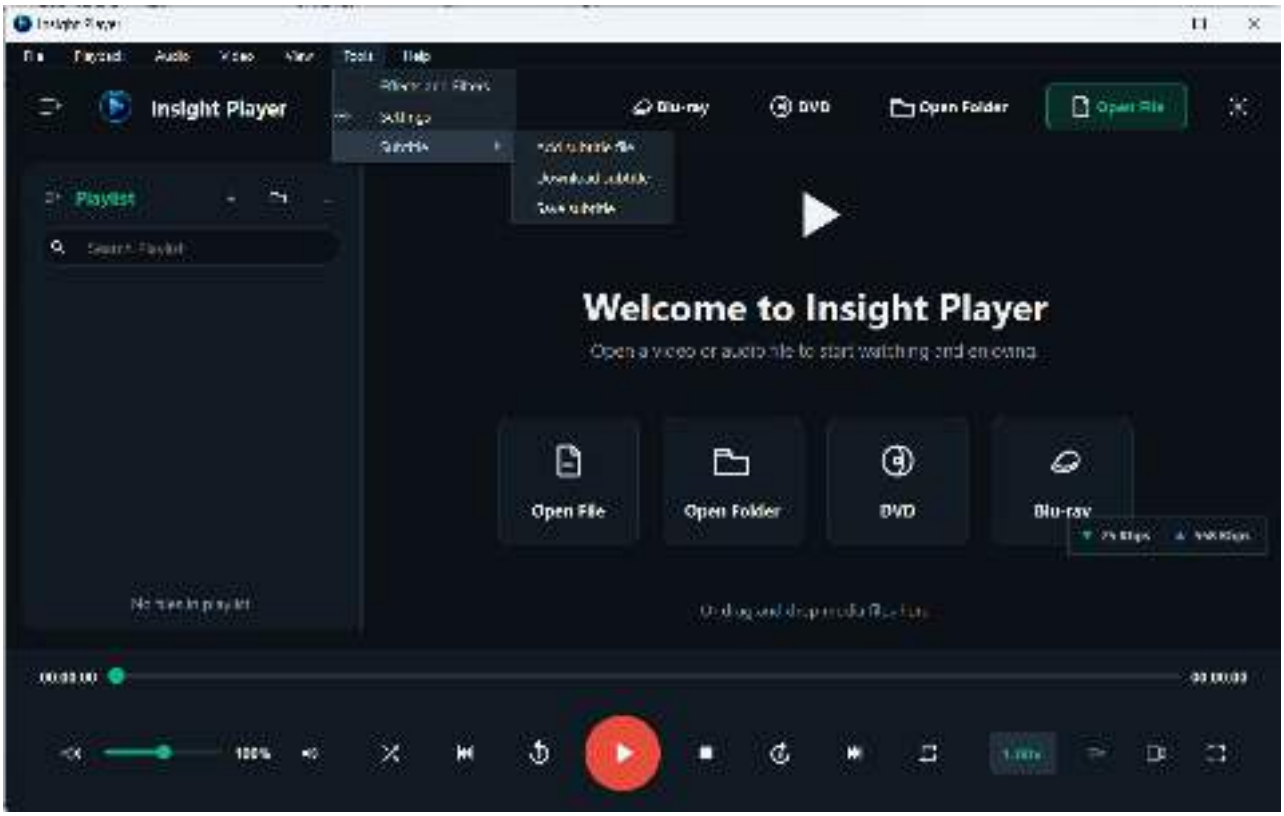

Figure 9 - Tools menu with effects, settings, and subtitle commands.

Tools command	Purpose
Effects and Filters	Open audio/video effects where available in the build.

Settings	Open player settings when implemented.
Add subtitle file	Load an external subtitle file for the current video.
Download subtitle	Future or build-dependent subtitle acquisition option.
Save subtitle	Save or export subtitle data where implemented.

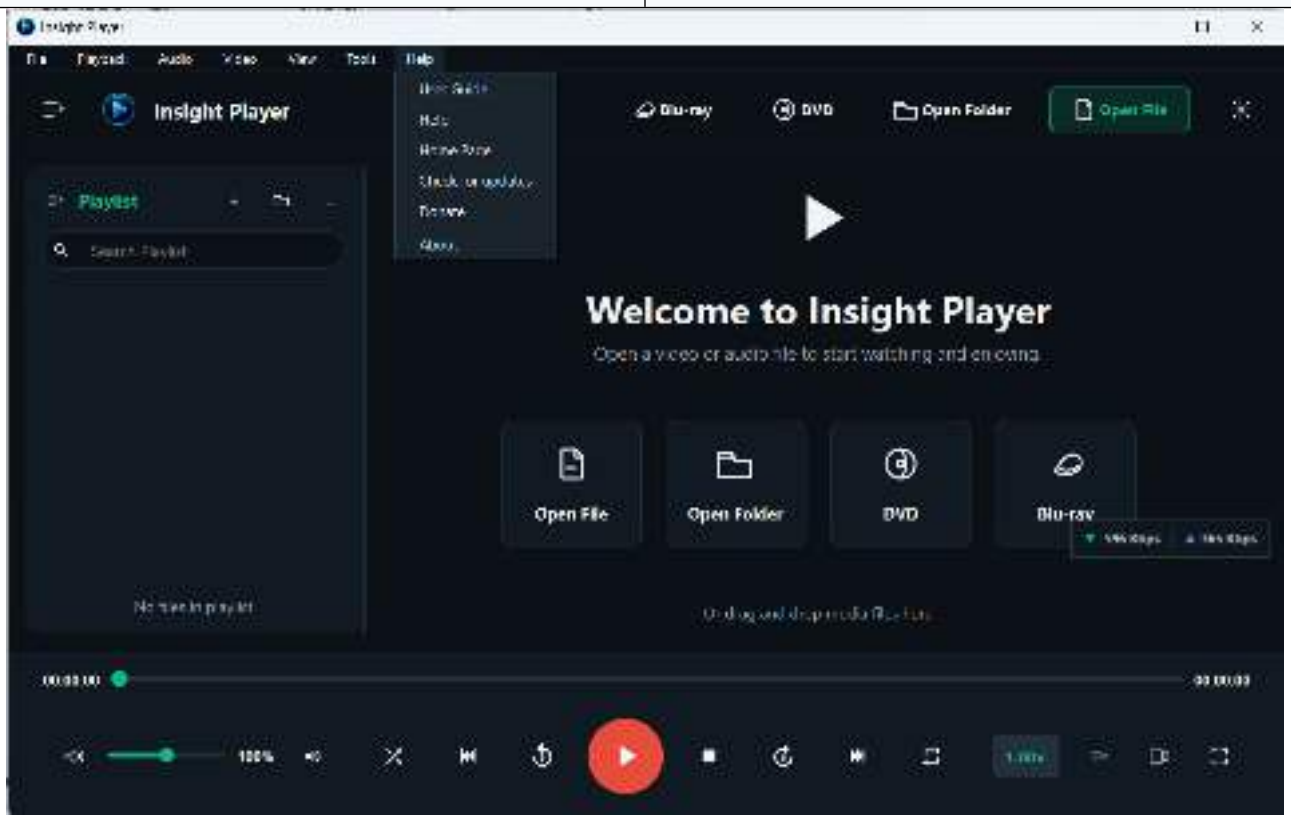

Figure 10 - Help menu with User Guide, Help, Home Page, Check for updates, Donate, and About.

Volume down / up	Down / Up Arrow	Decrease or increase volume.
Mute	M	Mute or unmute audio.
Fullscreen	F or toolbar button	Toggle fullscreen mode where supported.
Exit fullscreen	Esc	Return from fullscreen mode.
Open file	Ctrl+O or toolbar	Open a file depending on the active menu command.
Open disc	Ctrl+D where configured	Open DVD/BD dialog where available.
Exit application	Alt+X if configured	Close the program from the File menu.

Shortcut note

Shortcut assignments may vary by build. Prefer the visible menu shortcuts in the installed version when there is a conflict.

14. Troubleshooting

Problem	Possible cause	Recommended action
Program does not start	Missing runtime files or incomplete install	Reinstall the program or use the complete release package. Do not move only the EXE.
User Guide does not open	PDF missing from docs folder	Confirm docs/User_Guide_EN.pdf exists beside InsightPlayer.exe.
No sound	Muted player, low volume, or wrong Windows audio device	Check player volume, press M, and verify Windows sound output.
Video does not appear	Unsupported/damaged file or renderer issue	Try another file, update GPU drivers, and restart the player.
File does not open	Corrupted, incomplete, encrypted, or unsupported media	Test with a known good MP4/MP3 and verify the file path is accessible.
DVD does not play	Protected disc, drive issue, or invalid folder structure	Check Windows can read the disc and use a valid DVD/VIDEO_TS source.
Media Info is missing	Analyzer cannot read metadata	Try another file and confirm the file is not locked, corrupted, or on an unavailable drive.
Subtitle does not appear	Wrong subtitle file, encoding issue, or feature unavailable	Use a matching subtitle file and confirm subtitle feature status in the current build.
Controls seem disabled	No media loaded or current media type does not support command	Load a media file and try again.

15. Privacy, Third-Party Components, and Legal Use

Privacy and local operation

Insight Player is intended for local playback. Your local media files should remain on your device unless you explicitly use a future online feature that states otherwise. The application should not be described as collecting telemetry unless such functionality has been implemented and disclosed.

Third-party components

Component	Role in Insight Player	Notice
Qt	Desktop user interface and application framework	Subject to its own license terms.
VLC / libVLC	Media playback engine integration	VideoLAN/VLC trademarks and code remain property of their owners.
FFmpeg libraries	Media probing and technical stream information	FFmpeg is subject to its own license terms and configuration.

Legal and responsible use

- Use Insight Player only with media you own or are legally authorized to play.
- Do not use the player to facilitate copyright infringement, piracy, or unauthorized distribution.
- Do not claim the application bypasses DRM or protected media restrictions.

16. Support and Bug Reports

When requesting support, include enough information for the issue to be reproduced. A clear report helps developers identify whether the problem is caused by a file, codec, driver, missing runtime, disc protection, or application behavior.

Include in your report	Example
Program version	Insight Player 1.0
Windows version	Windows 10/11 64-bit
Media type	MP4 video, MP3 audio, DVD disc, VIDEO_TS folder
What you clicked	Open File, Open Folder, DVD, Help > User Guide
What happened	No video, no sound, crash, missing media info, PDF not found
Screenshot	Attach a screenshot of the problem if possible
Reproduction steps	List exact steps from launching the app to the error
